In conversations with Ernie Chandler of Gold Hill, he stated that the Clifton Millsite was in disrepair and becoming or is already a hazardous situation because of chemicals etc.. I called the Clifton people and talked with Bill Moeller of Clifton Mining Company and he stated that the door on the lab was kicked in and that they had replaced the door. He stated that he would send Bob Holliday out there on Saturday to secure and remove any hazardous chemical from the site which could be accessed by the general public. He stated that he would document this with pictures and a inspection report.
